To make a delicious strawberry Tagada syrup :

Â»

Blend the Tagada strawberries for 10 seconds at speed 7.

Â»

Add the sugar and water.

Â»

Set the Thermomix to speed 2 and let it run for 20 minutes, removing the measuring cup. (If you set it to 100°C, it will melt the Tagada strawberries and thicken the mixture. But if you do it at room temperature, strain the remaining strawberries through a sieve).

Â»

You can add food coloring or strawberry flavoring to achieve a deeper color.

Allow the homemade syrup to cool before enjoying it
